EMMANUEL OLATUNJI OLAGOKE

Backend Engineer | Python, Node.js, TypeScript, PostgreSQL, AWS, Docker, CI/CD
+234 706 050 3587 | emma.goke05@gmail.com | Linkedin | Nigeria (open to remote work)

Professional Summary

Backend engineer with hands-on experience since 2022 building and documenting REST APIs, optimizing SQL and PostgreSQL queries, integrating third-party systems (Paystack, Redbiller, OAuth2), and running asynchronous workloads with message queues (Celery, BullMQ, Redis). Supported products serving 200,000+ farmers and a payment gateway processing over 200 million NGN. Growing DevOps skills in Docker, Kubernetes (Amazon EKS), Terraform, and AWS, with an AWS Certified Cloud Practitioner credential.

Technical Skills

Languages: Python, TypeScript, JavaScript (Node.js), SQL

Frameworks: Django, Django REST Framework, Flask, NestJS, AdonisJS, Express

Databases and Caching: PostgreSQL, SQL query optimization, indexing (GIN), full-text search, Redis, TypeORM

Message Queues and Real-Time: Celery, BullMQ, Redis, WebSocket

APIs and Security: REST APIs, JWT, OAuth2, role-based access control (RBAC), two-factor authentication (2FA)

Third-Party Integrations: Paystack (Dedicated Virtual Accounts), Redbiller API, Sign in with Apple, Sign in with Google

DevOps and Cloud: CI/CD, GitHub Actions, Docker, Kubernetes (Amazon EKS), Terraform, AWS (EC2, ECR, EKS, RDS, S3, VPC), Digital Ocean, Linux, Git

Monitoring: Production health monitoring, system metrics dashboards (Plotly, psutil)

Work Experience

Backend Engineer

Crop2Cash | Oct 2023 – Apr 2026

- Built and maintained scalable REST APIs and backend services in Django, Django REST Framework, and Node.js powering web, mobile, and USSD products serving 200,000+ farmers.
- Managed a Paystack Dedicated Virtual Account (DVA) payment gateway processing over 200 million NGN in inflow and outflow, including bulk payment initiation and error handling.
- Implemented real-time notifications with Celery (message queue) and WebSocket for asynchronous processing, and optimized PostgreSQL queries to improve performance on high-volume transactions.
- Designed and shipped a Two-Factor Authentication (2FA) feature supporting authenticator apps and email, improving account security.
- Built an internal inventory management system for warehouse operations.

Backend Engineer (Contract)

CrescitaSolutions – Queposts | Aug 2025 – Dec 2025

- Designed and built a scalable classifieds platform from the ground up with NestJS, supporting job, business, and service listings.
- Implemented a hybrid full-text search engine using PostgreSQL ts_vector and GIN indexes, achieving sub-second query times, plus a multi-tiered relevance-ranking system with ts_rank and custom weighting.
- Built a high-throughput background job system with Redis and BullMQ for asynchronous notifications and ad workflows.
- Implemented role-based access control (RBAC) with custom permissions and a content-moderation queue.

- Built a multi-tier subscription and payment system with multi-currency support and bank transfer via the Redbiller API; managed deployment on Digital Ocean.

Backend Engineer (Contract)
GoodyBay | Aug 2025 – Sept 2025

- Initialized core backend infrastructure from scratch using NestJS to power Android and iOS applications.
- Built a multi-channel authentication system combining JWT (email/password) with OAuth2 for Sign in with Apple and Google.
- Integrated Paystack APIs into a secure payment checkout pipeline, and deployed Redis and BullMQ for background processing and push notifications.

Backend Engineer (Contract)
Cypherion | Oct 2024 – Apr 2025

- Built backend services for an Islamic investment platform using AdonisJS v6 and TypeScript.
- Integrated Paystack Dedicated Virtual Accounts (DVA) to create and manage user wallets.

Software Engineering Trainee
ALX | Aug 2022 – Oct 2023

- Completed an intensive, project-based program covering low-level programming, algorithms, and full-stack development.

DevOps and Cloud Projects

Cloud-Native Flask Monitoring App (Docker, Amazon ECR, Amazon EKS)
Personal project | 2026

- Built a Flask and psutil application with Plotly gauges that report CPU and memory usage and refresh every 5 seconds.
- Containerized the app with Docker, pushed the image to Amazon ECR, and deployed it to an Amazon EKS Kubernetes cluster using Python scripts (boto3 and the Kubernetes client).

Three-Tier AWS Infrastructure with Terraform
Personal project | 2026

- Wrote Terraform (infrastructure as code) for an AWS VPC with public, private, and database subnets, frontend and backend EC2 instances, and an RDS MySQL database, with remote state stored in S3.

Earlier Experience

Assistant Transmission Service Provider (NYSC)
Transmission Company of Nigeria (Gombe Sub-Region) | Aug 2021 – July 2022

- Maintained 330kV and 132kV power lines, repaired power equipment (relays, circuit breakers), and handled metering of power equipment.
- Participated in the installation of a 150MVA transformer.

Cyber Security Laboratory
Obafemi Awolowo University | Sept 2018 – Feb 2019

- Worked on servers and created a cloud virtual machine using the Proxmox bare-metal hypervisor.
- Researched encryption algorithms and implemented them by sending an encrypted email using the PGP algorithm.
- Worked extensively with Linux and Git for version control.

iLab Intern
Obafemi Awolowo University | 2018

- Built a Django (Python 3) backend for a virtual learning environment using the Weblab-Deusto library, and created virtual electrical and electronic practicals with Construct 2.

Education

B.Sc. Electronic and Electrical Engineering
Obafemi Awolowo University, Ile-Ife, Osun State | 2015 – 2020

Certifications

- AWS Certified Cloud Practitioner (2025)
